Alcoa Engineered Products Alloy 6061

Alcoa Engineered Products ALLOY 6061. Alloy 6061 is one of the most widely used alloys in the 6000 Series. This standard structural alloy, one of the most versatile of the heat- treatable alloys, is popular for medium to high strength requirements and has good toughness characteristics. Applications range from transportation components to machinery and equipment applications to recreation products and consumer durables.

6061 Aluminium Alloy Composition

Understanding Extruded Aluminum Alloys. Among Alcoa Engineered Products' structural 6XXX series alloys, 6005 and 6105 are medium strength alloys that are very similar to alloy 6061 except they contain higher amounts of silicon. These alloys are used in designs that require moderate strength, but are generally not recommended for applications where the structure may be susceptible to impact or overloading.

Alcoa -- Foundry Aluminum Alloys Benefits and Applications

Understanding Extruded Aluminum
Alloys. Alcoa Engineered Products offers
alloy 6082 for structural applications,
including rod, bar, tube and profiles. This
alloy offers similar but not equivalent
physical characteristics compared to
6061 alloy, and slightly higher
mechanical properties in the -T6
condition. Alloy 6082 is very common in
Europe and is gaining popularity in the
United States for rod and bar machining
stock, seamless tubing, structural
profiles and custom profiles.

Alcoa has been the industry leader since inventing the forged aluminum wheel in 1948 using an alloy it had developed for the aerospace industry. In 1968, Alcoa set the industry standard again when it launched its 6061 alloy for forged aluminum wheels. Alcoa's 6061 material provided a strong, durable alloy, resistant to corrosion that is used to this day by all major forged aluminum wheel manufacturers.
