In ring theory and related areas of mathematics a central simple algebra over a field K is a finite-dimensional associative algebra A , which is simple, and for which the center is exactly K . As an example, note that any simple algebra is a central simple algebra over its center. For example, the complex numbers C form a CSA over themselves, but not over the real numbers R . The quaternions H form a 4-dimensional CSA over R , and in fact represent the only non-trivial element of the Brauer group of
