Data Stream Mining (also known as stream learning) is the process of extracting knowledge structures from continuous, rapid data records. A data stream is an ordered sequence of instances that in many applications of data stream mining can be read only once or a small number of times using limited computing and storage capabilities.. In many data stream mining applications, the goal is to ...

As the currency that fuels and funds Digital Transformation, information is your most important asset. At AIIM, we believe that there is a core set of capabilities that are necessary for organizations to digitally transform.

AIIM - The Association for Intelligent Information Management

This collection of articles and multimedia draws together McKinsey's thinking on food security. As

the COVID-19 pandemic continues to affect access to food for many, what can food banks, distribution partners, philanthropic foundations, and the private sector do to increase resilience and ensure that people across North America have reliable access to nutritious meals?
