Soft computing, as opposed to traditional computing, deals with approximate models and gives solutions to complex real-life problems. Unlike hard computing, soft computing is tolerant of imprecision, uncertainty, partial truth, and approximations. In effect, the role model for soft computing is the human mind.

### **An Overview of Soft Computing - ScienceDirect**

Soft computing employs fuzzy logic and probabilistic reasoning while hard computing is based on binary or crisp systems. Hard computing has features such as precision and categoricity. As against, approximation and dispositionality are the characteristics of soft computing. Soft computing approach is probabilistic in nature whereas hard computing is deterministic.

Soft computing is the use of approximate calculations to provide imprecise but usable solutions to complex computational problems. The approach enables solutions for problems that may be either unsolvable or just too time-consuming to solve with current hardware. Soft computing is sometimes referred to as computational intelligence.
