Genera Graminum Grasses Of The World

Poaceae or Gramineae is a large and nearly ubiquitous family of monocotyledonous flowering plants known as grasses. It includes the cereal grasses, bamboos and the grasses of natural grassland and species cultivated in lawns and pasture. The latter are commonly referred to collectively as grass. With around 780 genera and around 12,000 species, the Poaceae is the fifth-largest plant family, following the Asteraceae, Orchidaceae, Fabaceae and Rubiaceae. The Poaceae are the most

Grass genera of the world - contents

Rottboellia cochinchinensis is a species of grass known by the common names Itchgrass, Raoul grass, corngrass, Kokoma grass, Guinea-fowl grass, jointed grass, Shamwa grass and Kelly grass. It is a tall, tufted annual grass whose stems grow up to 300 cm in height with leaf-blades of up to 45 cm in length.

Rottboellia cochinchinensis - Wikipedia

A lot has changed in plant sciences during the last 30 years, and this is a fully functional replacement for the previous desktop references to the world's grasses, Clayton and Renvoize's *Genera Graminum* (1986) and *The Grass Genera of the World* (Watson & Dallwitz, 1994). There are identification keys to the subfamilies and to the genera in each subfamily, lists of common synonyms at the generic level, descriptions, chromosome numbers when known, brief statements of distributions, and ...

Families and Genera of Vascular Plants. Vol. XIII ...

All true grasses belong to a single family of flowering plants, Gramineae or Poaceae. I use the phrase "true grasses" because there are many plants that have "grass" as part of their common name that are not, in fact, grasses. Many, but not all, have grass-like leaves that fool the uninitiated. "GRASSES" THAT ARE NOT GRASSES

Agrostology; An Introduction to the Systematics of Grasses
