Hvac Air Duct Leakage Test

The HVAC Air Duct Leakage Test Manual provides practical and detailed procedures for conducting leakage tests. Apparent differences of about ten percent between fan delivery and sum of airflow measurements at terminals do not necessarily mean poor sealing and excess leakage. Potential accuracy of flow measurements should be evaluated.

Leakage class can be calculated using Equation 3 but needs to be specified if duct air leakage tests are required. Figure 5-1L from the 2012 SMACNA HVAC Air Duct Leakage Test Manual shows the allowable leakage as a function of Duct Leakage Classification and static pressure in the duct.

HVAC Duct Air Leakage 9-12-19 - SMACNA

A duct leakage tester is a diagnostic tool designed to measure the airtightness of forced air heating, ventilating and air-conditioning (HVAC) ductwork. A duct leakage tester consists of a calibrated fan for measuring an air flow rate and a pressure sensing device to measure the pressure created by the fan flow.

Appendix E from the SMACNA HVAC Duct Leak Test Manual that quantifi es the amount of leakage by pressure for each duct class. Th e engineer can use this table to determine the expected total leakage of the system designed prior to selecting the fan and associated costs for increased horsepower to compensate for leakage.

What is an Allowable Duct System Leakage Specification?

Duct HVAC Leak One place that the orifice is utilized extensively in the field is as part of a duct pressure test kit. The orifice itself is normally mounted in a solid piece of pipe and is supplied with its own calibration curves.

SMACNA first published a procedure for leakage testing of so-called medium and high pressure ductwork since January 1965. It appeared in Chapter 10 of the high velocity (later high pressure) construction standards and in Chapter 8 of the "Balancing and Adjustment of Air Distribution Systems Manual" of 1967 vintage.

The spots where two air ducts connect are common places for leaks to occur. If you place your hand near these joints and you feel air coming out, you know that there's a leak. You can also try running your hand under other parts of your ductwork to feel for larger leaks. Mark any leaks you find with a grease pencil.

Testing includes the use of high technology viewing and recording equipment, air pressure tests, and an ocular inspection of your HVAC equipment to determine the irregularities of your duct system. The first step in duct testing is closing all the vents to make sure that the only place that air pressure can go through is via leaks along the ducts.
