## **4 Important Shell Script Types For Linux Newbies (Helpful)**

A shell script is a computer program designed to be run by the Unix shell, a command-line interpreter. The various dialects of shell scripts are considered to be scripting languages. Typical operations performed by shell scripts include file manipulation, program execution, and printing text. A script which sets up the environment, runs the program, and does any necessary cleanup, logging, etc. is called a wrapper. The term is also used more generally to mean the automated mode of running an ope

## **Unix shell - Wikipedia**

If you know of any command, say, ls, you type it, and then hit return, the shell will know where that program (ls) is, invoke it, and show you the result. This is the "non-script" shell usage. But, if you order a couple of such commands in a sequence, say A, B, C, D, and then put it (the sequence) in an executable file, you've got a program.

## **linux - Is shell script a programming language? - Unix ...**

Linux and Unix Shell Programming is structured in 5 parts: \* Part 1 deals with the Shell itself, introducing the various commands and syntax \* Part 2 introduces all the major text filtering tools available to the shell \* Part 3 explains the login environment and customization \* Part 4 covers basic shell programming \* Part 5 introduces more advanced shell programming techniques
