Definition. Obesity is the condition of having an excessive accumulation of fat in the body, resulting in a body weight more than 20% above the average for height, age, sex, and body type, and in elevated risk of disability, illness, and death. Description.

Obesity | Encyclopedia.com

Defining obesity. Obesity was traditionally defined as an increase in body weight that was greater than 20 percent of an individual's ideal body weight—the weight associated with the lowest risk of death, as determined by certain factors, such as age, height, and gender. Based on these factors, overweight could then be defined as a 15–20 percent increase over ideal body weight.
